

UFO, Bitufa's labour-saving and durable solution for roof penetrations

- The UFO is made of 5 mm homogeneous SBS-modified bitumen.
- UFO, the flexible watertight solution for time-consuming, laborious seals around roof penetrations and rainwater down pipes.
- The UFO is installed with the aid of a torch or a hot-air blower. A breather pipe can be sealed leak-proof within 5 minutes.
- No need for measuring and cutting in. The UFO is the seamless answer to leaks, damage and recurring problems caused by movements at roof penetrations.
- UFOs are compatible with APP as well as SBS waterproofing membranes.
- The UFO has an elasticity of 1000% and a service life of 20 years.

Installation

- Clean the roofing around the penetration and the pipe itself using primer.
- Heat the UFO slightly around the hole, if necessary, and slide it over the pipe.
- Weld down the outer edge of the UFO on the roofing using a moderate flame until a bitumen bead flows out. The UFO must not be torched on the pipe or directly around it!
- Apply a solvent-free SBS-modified bitumen paste between the pipe and the UFO or use contact tape.

Applications

- Sealing roof penetrations.
- Sealing around rainwater down pipes.
